SUMMARY

Full-Stack Software Engineer with hands-on experience across React, Node.js, Express, and PostgreSQL, plus applied exposure to secure application development and API security practices. Proven contributor on cross-functional Agile teams, delivering frontend and backend features within a shared product portal using Git-based workflows (Bitbucket) and Atlassian tooling (Jira) for sprint planning, ticket tracking, and release coordination. Skilled at designing RESTful APIs, managing asynchronous data flow, and building systems that support real-time interaction and persistence. Focused on clean, efficient code and reliable, user-centered solutions, with a growing interest in frontend development and UI/UX design.

TECHNICAL SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design

Languages: JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express, REST APIs, API Design, Routing, Server Architecture

Database: PostgreSQL, SQL, CRUD Operations, Data Modeling, Query Optimization

Tools & Workflow: Git, GitHub, Bitbucket, Atlassian Jira, Postman, VS Code, Chrome DevTools, Netlify (CI/CD), Pull Requests & Code Review, Agile/Scrum

Other: API Integration, Async Programming, Debugging, Cross-Functional Collaboration, Problem Solving

EXPERIENCE

Software Engineering Intern — Data Theorem

May 2026 – Present

- Contribute frontend and backend code to the company's Portal product as an embedded member of the Portal team, working within an Agile/Scrum environment with sprint ceremonies, standups, and retrospectives.
- Manage version control and code review workflows using Bitbucket, including feature branching, pull requests, and merge coordination with senior engineers.
- Track, groom, and update work using Atlassian Jira, keeping tickets current across sprints and coordinating handoffs with backend, frontend, and QA teammates.
- Apply secure application development and API security practices to feature work, aligning code changes with the team's security review standards.
- Collaborate as an active team contributor on scalable engineering workflows, debugging, and API integrations that support the broader Portal platform.

Junior Software Engineer — AnnieCannons

Jan 2025 – Present

- Built and maintained full-stack application features using React, Node.js, Express, and PostgreSQL.
- Designed and implemented RESTful API endpoints supporting CRUD operations and scalable data flow.
- Integrated frontend and backend systems to enable real-time user interaction and persistent data storage.
- Structured reusable frontend components and maintained clean, scalable application architecture.
- Debugged and optimized application performance, improving system reliability and efficiency.
- Collaborated with team members in an Agile development environment to build and improve full-stack applications.

Technical Support & Systems Manager — ESA Elite VBC, Las Vegas, NV

2025 – 2026

- Maintained and supported internal web-based systems and digital platforms used by staff and stakeholders.
- Resolved technical issues and improved system performance through troubleshooting and optimization.
- Translated user needs into technical solutions, improving workflow efficiency and system usability.

Real Estate Professional — Nevada & Hawaii

2012 – 2023

- Managed multiple high-value client workflows simultaneously, building strong organizational skills, attention to detail, and the ability to prioritize under pressure that carry directly into managing sprints and tickets today.
- Led negotiations and transactions requiring clear communication, active listening, and stakeholder management — core soft skills now applied to cross-functional collaboration with engineering, QA, and product teams.
- Analyzed market data and financial trends to guide strategic decisions, reinforcing an analytical, detail-oriented approach to problem solving.

PROJECTS

- Designed and deployed full-stack applications using React, Node.js, Express, and PostgreSQL, leveraging Netlify's CI/CD pipeline to auto-build and publish updates on every push to GitHub.
- Built and integrated RESTful APIs to manage application data and support real-time user interactions.
- Developed backend systems handling data storage, retrieval, and processing using SQL and database queries.
- Implemented dynamic, responsive frontend interfaces connected to backend services for a seamless user experience.

EDUCATION

AnnieCannons — Software Development Training

Full-Stack Certified Engineer | Advanced Frontend Developer | Advanced Backend Developer | Google AI Prompting
